

Abstract

The present invention relates to a device and a method for administration of a substance to a mammal by means of inhalation. The device according to the invention comprises:

- 5 - aerosol means, for creating an aerosol,
 - control means, for manipulating the aerosol in order to thereby control the particle size of the aerosol, wherein
 - the device is provided with supply means for adding a substance to the aerosol, prior to or upon release of the aerosol from the device.
- 10 The device according to the present invention is suitable for pulmonary delivery of substances, such as drugs.
